

What cannot be handed to an *Algorithm*

Capability maps chart what AI can do. This one charts what stays with a person — not forever, necessarily, but as of today.

↑ THE THREAD IS RESPONSIBILITY

01 Responsibility

APEX · THE BEARER

The one act AI cannot perform today: to answer for an outcome. A model can decide; only a bearer can be held to the decision. Whether that bearer could ever be non-human — perhaps paired with a person — is an open question this sheet does not pretend to close.

02 Intuition

FACULTY · BELOW THE TOKEN

It lives beneath language — often not even verbal to the person who carries it. AI operates on the verbal layer; intuition is the floor under it. Not a weaker kind of reasoning — a different stratum.

03 The legally significant fold

ACT · THE BINDING

fold — the binding act after which something holds: a signature, a consent, a decision answered for. Possible only inside human responsibility, steered by intuition, grounded in a legal frame. AI may prepare it; only one who can answer may fold it.

Seven human skills that still matter — the root system that keeps a person able to occupy the three above.

1 Read — and know that you've understood.

Reading that becomes comprehension; the ground of any fold.

FEEDS → INTUITION · FOLD

2 Turn reading into action.

Applying what you read — the skill of taking it on.

FEEDS → RESPONSIBILITY

3 Grow the inner navigator by living.

Intuition is fed by experience, not by instruction.

FEEDS → INTUITION

4 Hear the people around you.

A fold binds others; you must hear them first.

FEEDS → FOLD · RESPONSIBILITY

5 Wear roles as shells of responsibility.

A role is not a mask — it's the shape responsibility takes in public.

FEEDS → RESPONSIBILITY

6 Know the legal edges.

Limits, consequences, grounds — the frame a fold rests on.

FEEDS → FOLD

7 Be honest with yourself first.

About accepting — and being ready to carry — the responsibility you declare outward.

FEEDS → RESPONSIBILITY
